

## Japan's energy self-sufficiency is the lowest in the world

<sup>i</sup> The percentage beside each country name is the ratio of nuclear energy in the total primary energy supply, from the 2013 IEA Energy Balances for OECD and non-OECD countries.

<sup>ii</sup> Source of energy self-sufficiencies and nuclear share: 2013 IEA Energy Balances for OECD and non-OECD countries.

<sup>iii</sup> Source for GNI per capita (Atlas method, current US\$): World Bank

<sup>iv</sup> The IEA Energy Balance 2013 projections for 2012 were used for OECD countries. The IEA Energy Balance non-OECD 2013 data were plotted for 2011 (no projections exist for 2012). The GNI per capita figures selected for these countries are therefore relative to the 2011 and 2012 self-sufficiencies.

<sup>v</sup> The IEA projected small nuclear share in 2012 is from Oh's operation from July 2012 through September 2013 (No.3 & 4, 1.18GW respectively).
